Jan 7, 2000 Eve

2055 Beams synchroid at $\gamma = 30$! All RF stillon, beam intensities equal (4×10^8)

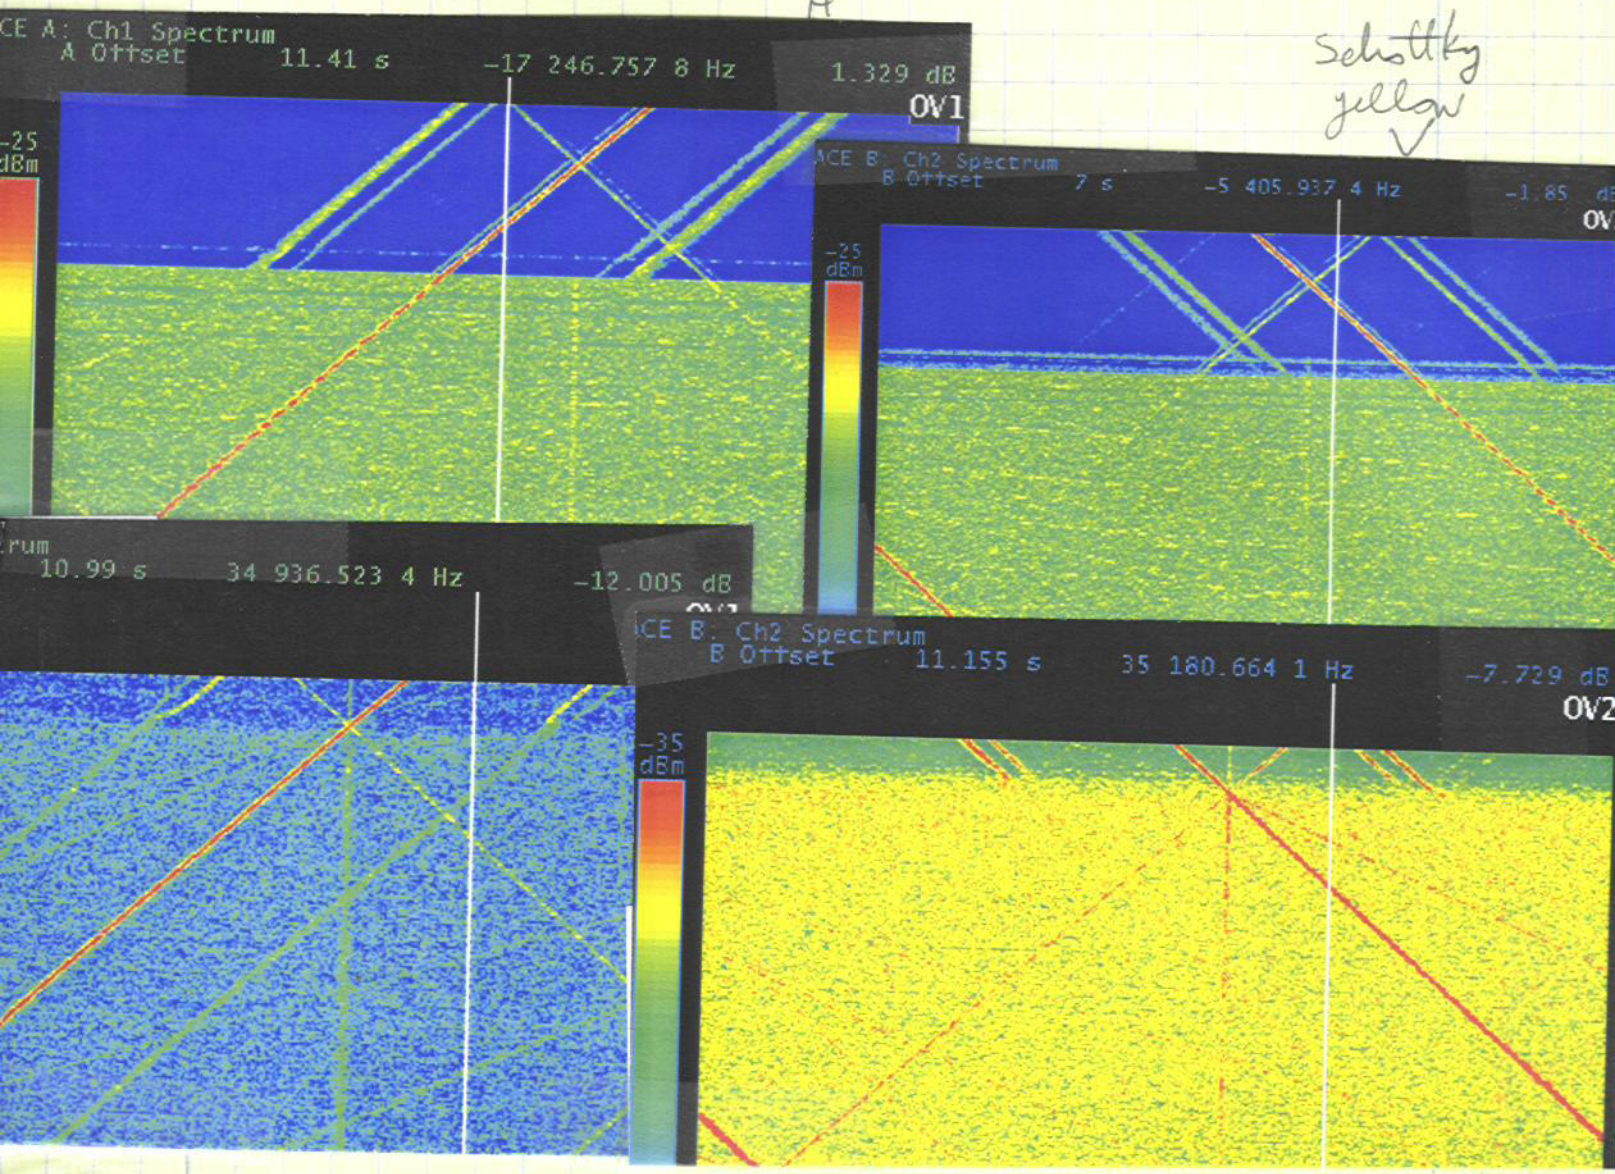
Blue RF trips at 20:56:40 while cogging blue. Beam debunches. RF folks know what gaingon & want to 'go for it'

Will work ongoing for gusto: next ramp to $\gamma = 70$.

2100 Ramping down. psxarc90 tripson load fault. Resets OK.
Paul accidentally ramps $\gamma = 30$ to inject. Then go to park, back to inject.

H

Schottky yellow



H V

schottky Blue

large Q' in yellow, asymmetric β lines suggests jump is being fired too soon
